**16 Training Hours**

## Course Overview

Technology has evolved, but unfortunately policing has not. We are we fighting 2018 criminals with 1995 methods! This course is designed to help bring your officers and investigators up to speed with the new technology trends and give them practical/applicable tools to assist them immediately.

This course covers the skills investigators need to conduct successful online investigations involving open source and social media.

Topics include internet basics such as IP addresses and domains, an overview of currently popular social media platforms, and best practices for building an online undercover profile.

I will demonstrate both open-source and commercially-available investigative tools for social engineering, information gathering, and artifacts related to social media; as well as automated utilities to capture information and crawl websites.

This class is taught by a police officer for police officers. The method of teaching is easy and straight forward, and each officer will leave with immediately applicable tools to assist in investigations.
